What is BAJA SAE ?

Baja SAE is an international collegiate engineering competition organized by SAE International.

Student teams design and build a single-seat off-road vehicle that must survive rough terrain, jumps, rocks, mud and a multi-hour endurance race.

Competition has 3 main parts:

Static and Business events:

Teams present their design, business presentations, cost report, and project justification to industry judges.

Dynamic events:

Acceleration, hill climb, maneuverability, and suspension/traction test how the car performs under demanding off-road conditions.

Endurance race:

A 4-hour wheel-to-wheel race where reliability, smart engineering, and teamwork matter as much as raw speed.

Baja SAE challenges students to apply classroom theory to a real vehicle while working under strict design rules, tight budgets and hard deadlines. Every team must work within the same engine package and safety rules, which means performance comes from good engineering rather than raw power.

Who is uOttawa BAJA?

Rough Rider Racing (RRR) is the University of Ottawa's Baja SAE team.

We are a student-run design team that brings together undergraduates from mechanical, electrical, software, computer engineering students and more!

MISSION:

- Design, build and race a competitive Baja SAE vehicle that complies with the latest ruleset.
- Give students hands-on experience in design, fabrication, testing and project management.
- Represent the University of Ottawa at competitions across North America and build a sustainable program for future students.

The team is organized into technical subteams for **Chassis**, **Suspension**, **Drivetrain**, and **Electrical**, supported by an **Admin** group that manages finances, sponsorship, outreach, and logistics.

Every weld, calculation, and design change is performed by students under the guidance of faculty and alumni.

Supporting Rough Rider Racing is an investment in future engineers and technologists.

WHY US?

03

Through Baja SAE, our members gain experience that is difficult to replicate in the classroom:

Engineering Practice

CAD modeling, hand calculations, FEA, design reviews, and documentation.

Manufacturing Skills

Machining, welding, fabrication, wiring, assembly, and troubleshooting.

Project Execution

Budgeting, scheduling, risk management, communication, and real deadlines.

For Sponsors, Rough Rider Racing is a direct pipeline to students who:

- Already work in cross-functional technical teams.
- Are comfortable in shops, labs and test environments.
- Take ownership of long-term projects and deliver under real deadlines.

PARTNERS GAIN VISIBILITY ON CAMPUS AND ACCESS TO CURATED RESUME BOOKLETS, LUNCH AND LEARNS, WORKSHOPS AND RECRUITING EVENTS THAT CONNECT THEM DIRECTLY WITH ENGAGED STUDENTS.

Each Rough Rider Racing car is a ground-up student design, built to meet Baja SAE rules and optimized for harsh off-road performance.

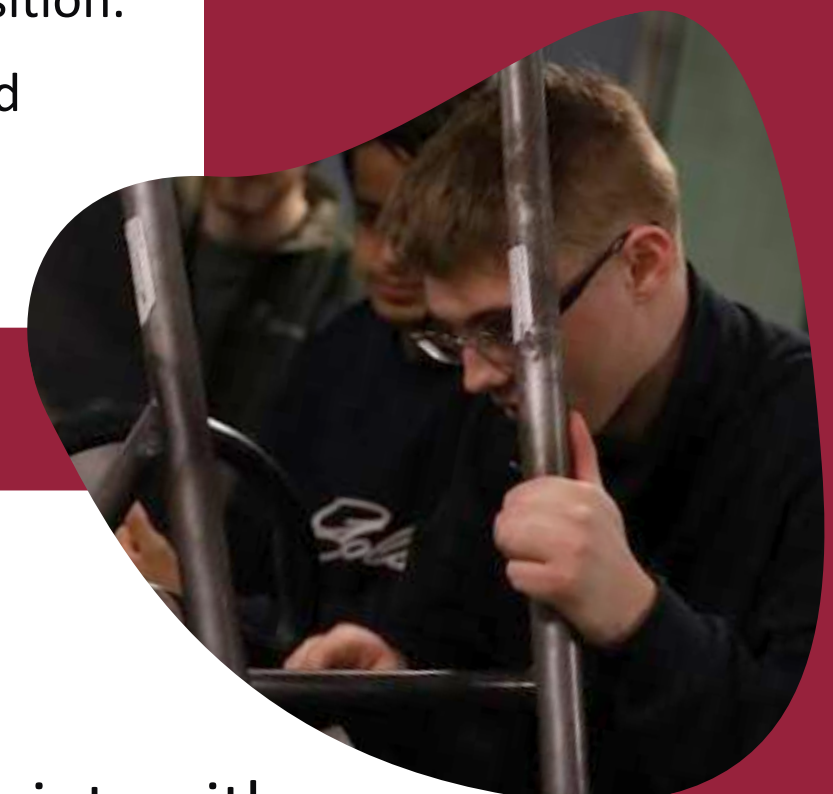

VEHICLE & SUBTEAMS

05

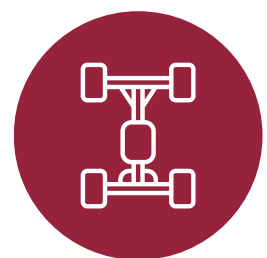

THE VEHICLE

- A single-seat off-road vehicle built on a steel space-frame chassis with an integrated roll cage.
- Powered by the specified engine package mandated by the Baja SAE rules, with a 2 wheels drive train.
- Double-wishbone four-wheel independent suspension, tuned for ground clearance, travel and stability on rough terrain.
- Hydraulic disc brakes on all four corners and a steering system designed for precise, low-speed maneuvering and tight courses.
- Electrical system integrates safety shutdown circuits, driver controls, sensors and data acquisition.

The car is designed for reliability and serviceability so components can be inspected, replaced and tuned quickly between events.

SUB TEAMS

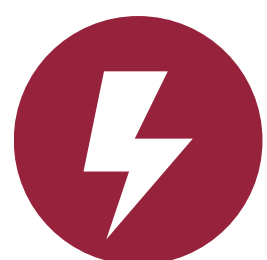

Chassis: Designs the frame, roll cage, ergonomics, mounting points with a focus on stiffness, safety, weight reduction and serviceability.

Suspension: Develops suspension geometry, selects springs and dampers, and tunes ride height and handling, comfort and durability over rough terrain.

Drivetrain: Handles CVT tuning, gearing, shafts, sprockets, hubs and chain management with a focus on efficiency and reliability.

Electrical: Designs the wiring harness, kill switches, sensor network and data acquisition for safe and reliable operation.

Admin / Operations: Manages sponsorships, purchasing, budgeting, marketing, events and logistics for testing and competitions.

Designing, building and racing a Baja SAE vehicle is a multi-year investment. Our projected budget for the 2025–2027 cycle is ~ **\$50,000 CAD**.

This allow us to compete with our current 2025–2026 car and to begin development of a new car for the 2027 season.

Cost breakdown:

Manufacturing & Hardware

Chassis tubing, suspension links, drivetrain components, braking and steering parts, fasteners, sensors, wiring, batteries and other fabrication materials.

Services & Contracts

Professional machining and fabrication, driveshaft work, shock rebuilding, transponder subscriptions and other specialized external services.

Tools & Equipment

Shared tools, hand tools, measuring equipment and shop accessories that allow us to safely fabricate, assembly and maintenance.

Testing & Validation

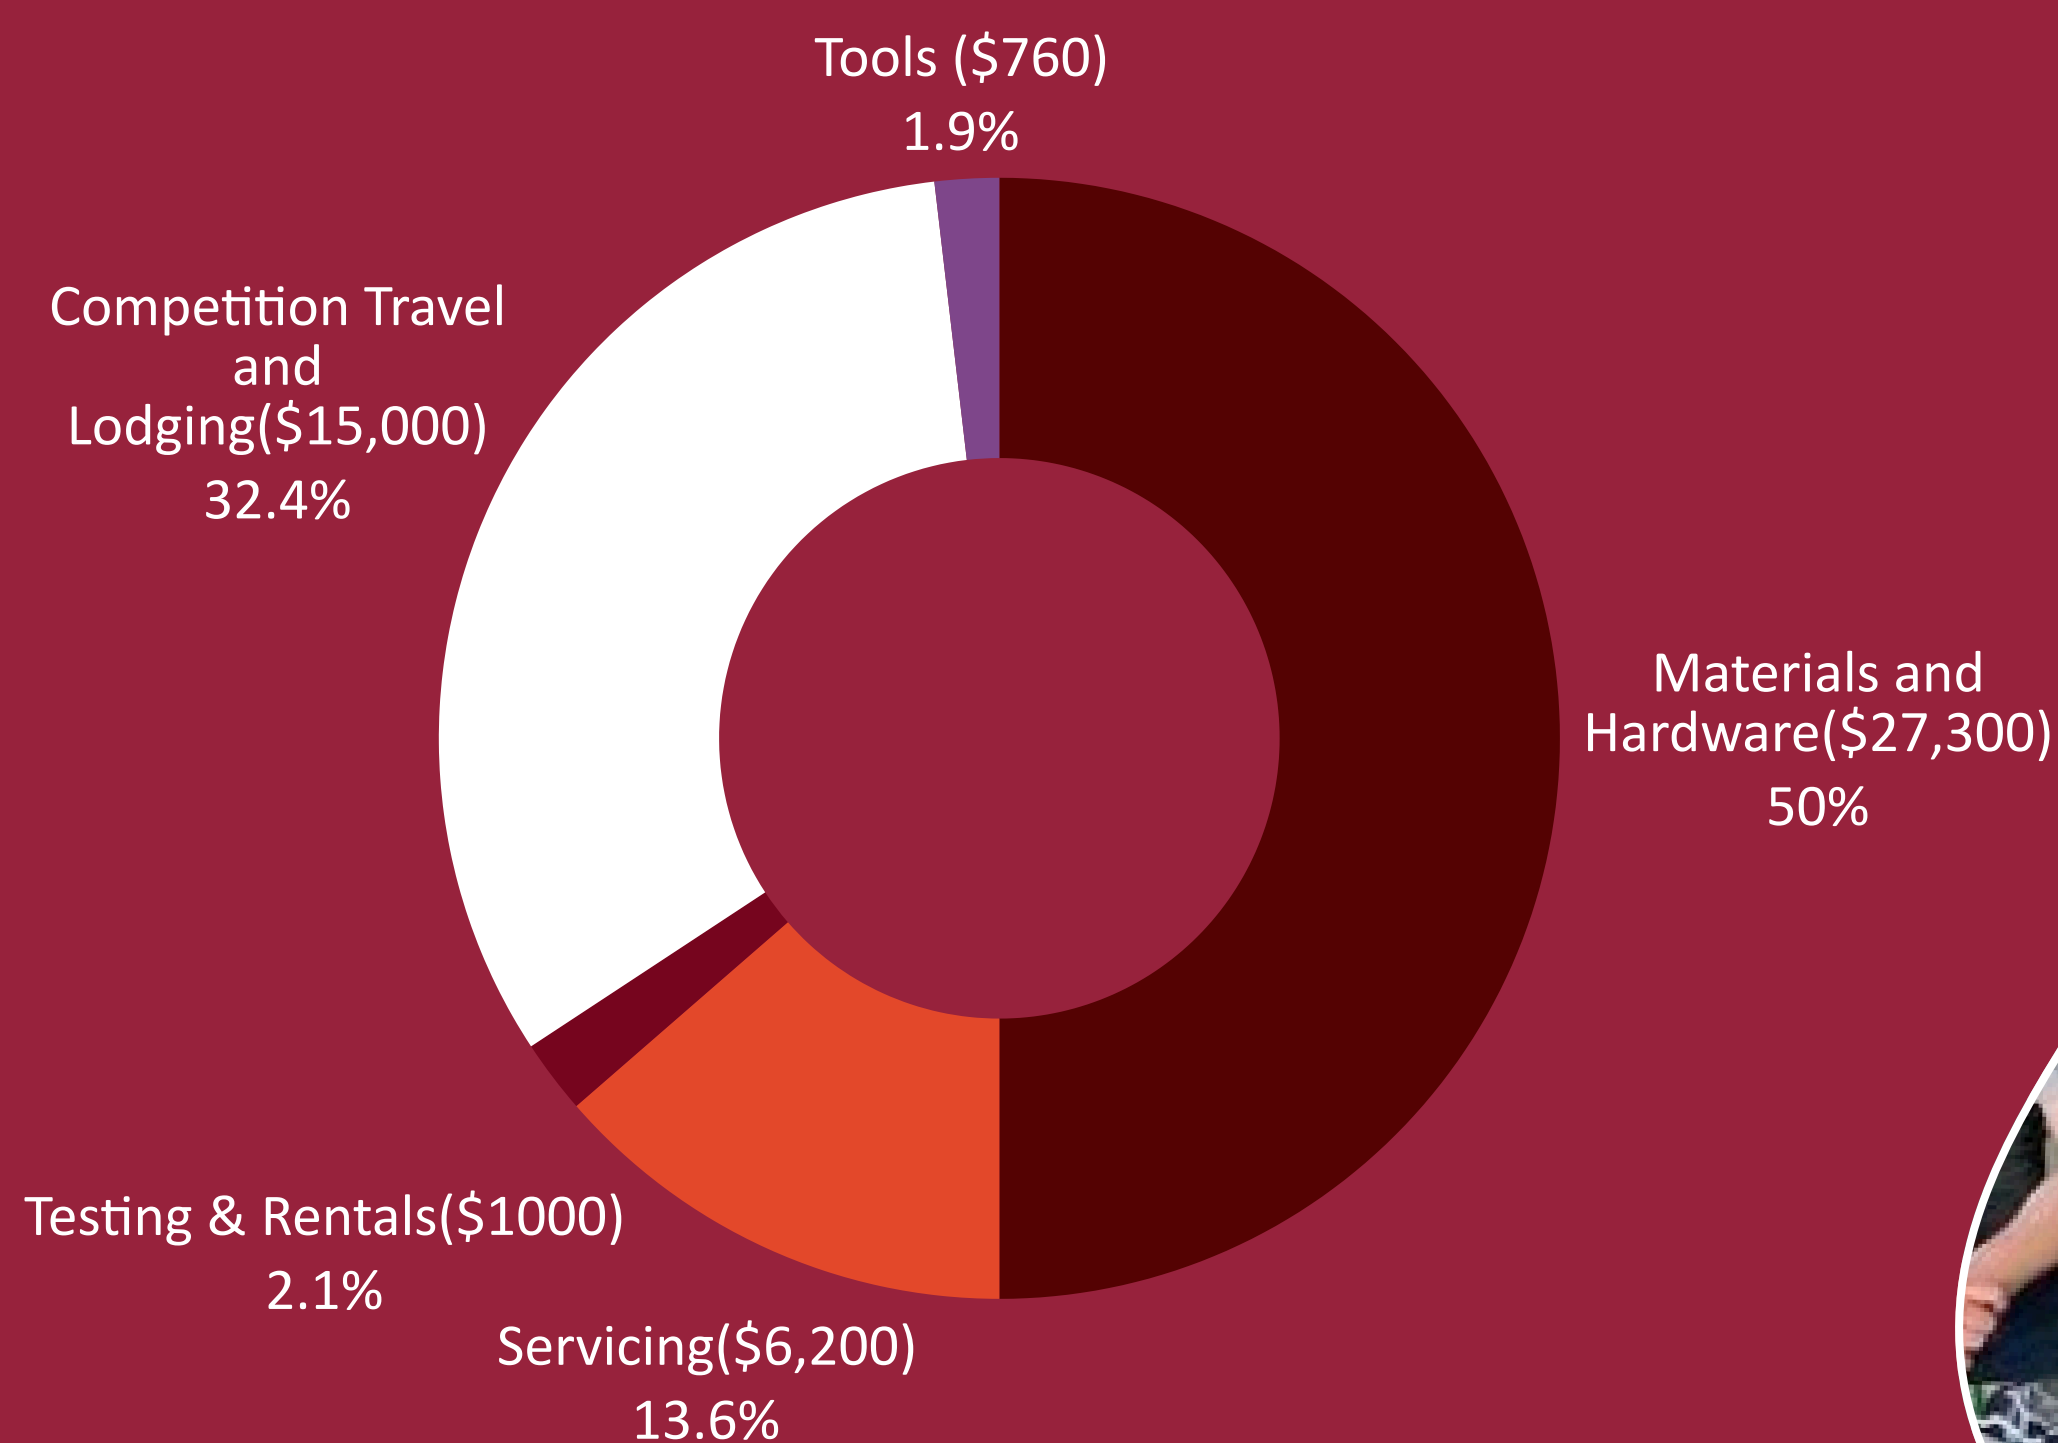

Trail and track passes, memberships for off-road facilities, and construction of obstacles used to validate the car before competition.

Competition Travel, Lodging

Travel and accommodations for 12–14 team members at each of our three target events: Baja SAE New York 2026, Oktobaja 2026 and Épreuve du Nord 2027.

Why sponsor support matters

These costs cover the full lifecycle of our program: finishing the current car, testing, competing across 2-3 events and beginning the next vehicle. Sponsor support helps us focus on safe, reliable engineering decisions rather than cutting corners on cost.

PLATINUM (\$7,500+) – 1 SPOT

Own the program as Title Sponsor

At Competitions & Testing

- Largest logo on the car/ banner in a prime location.
- Logo on team canopy/paddock banner at Baja SAE , Oktobaja and Épreuve du Nord.
- Option to display a company banner/ flag in our pit area (where event rules allow) and invite reps to a local test day or a car demo at your facility.

On Campus & Student Engagement

- Priority access to host 1–2 lunch and learns, workshops or mini hackathons with our members each year.
- Co-branded flagship event (e.g., “Rough Rider Racing x [Company] Design Night”).

Promotion & Recruiting

- Your company name integrated as “Rough Rider Racing – Presented by [Company]” on the front page of the sponsorship package, our website home page, and our main competition recap posts.
- Largest logo and top placemnet on our website, posters, banner and team shirts.
- Featured sponsor spotlight on Instagram/ LinkedIn each semester + logo in season recap video.
- Featured page in our semesterly resume booklet and early access to curated resumes of active team members.
- Named subsystem sponsor (e.g., “Electrical supported by *Your Company*”)
- Naming rights to something very visible (car nickname, pit canopy, main event).

GOLD (\$2,500 - \$7,499)

Deep engagement + on-car presence

At Competitions & Testing

- Medium-sized logo on the car/ banner.

On Campus & Student Engagement

- One lunch and learn or technical workshop per year.
- Invitation to join a design review or shop tour with the team.
- Choose one extra engagement option:
 - Host a car + team demo at your facility (where logistics allow), or
 - Host an additional virtual or on-campus info session focused on recruiting.

Promotion & Recruiting

- Medium-sized logo on our website, posters, banner and team shirts.
- Individual social media thank-you post at the start of the season as a “Major Partner”.
- Early-access to our semesterly resume booklet of active team members, filtered by discipline or subteam.
- Named subsystem sponsor (e.g., “Electrical supported by Your Company”)

BRONZE (\$250 - \$499)

Get your brand in front of students

At Competitions & Testing

- small logo on our paddock banner and car.

On Campus & Student Engagement

- Option to send a short company blurb or QR code for our team bulletin board and Teams channels.

Promotion & Recruiting

- Logo listed on our website in the Bronze sponsors section.
- Small-sized logo on our website, posters, banner and team shirts.
- Grouped social media thank-you post with other Bronze sponsors each season.

SILVER (\$500-\$2,499)

Add recruiting via resume booklet and light team engagement

At Competitions & Testing

- Medium-sized logo on the car/ the banner.

On Campus & Student Engagement

- Host one lunch and learn or technical workshop per year.
- Invitation to join a design review or shop tour with the team.
- Option to send a short company blurb or QR code for our team bulletin board and Teams channels.

Promotion & Recruiting

- Medium-sized logo on our website, posters, banner and team shirts.
- Group social media thank-you post at the start of the season.
- Access to our semesterly resume booklet of active team members, filtered by discipline or subteam.
- Opportunity to submit one job or co-op posting per semester for us to share with team members.

IN KIND SPONSORSHIPS

(PARTS, SERVICES, DISCOUNTS, SOFTWARE – VALUED AT FAIR MARKET VALUE AND MATCHED TO A TIER)

Examples of Support

- Materials: steel tubing, sheet metal, fasteners, bearings, seals, fluids.
- Components: drivetrain parts, suspension hardware, sensors, electronics.
- Services: machining, welding, heat treatment, coating, printing, apparel.
- Software & tools: CAD, simulation, analysis tools, measurement equipment.

Recognition

- In-kind contributions that directly offset our out-of-pocket costs (e.g., materials, components, machining, fabrication, printing, apparel) are given an equivalent dollar value and matched to the Bronze, Silver, Gold or Platinum tier.
 - Software provided under standard academic/educational licensing programs is recognized separately in our Software Partners category and is not tiered by monetary level.

We want our sponsors to connect directly with the students they support. To make that easy, we offer several ways for partners to interact with Rough Rider Racing throughout the year.

Lunch & Learns

Sponsors can host a lunchtime talk where engineers or recruiters share projects, technologies or career paths. These sessions are informal, interactive and a great way to meet students from multiple subteams in one place.

Technical Workshops

Working with our leads, sponsors can co-develop a hands-on workshop on topics such as CAD workflows, drivetrain design, wiring standards, simulation, safety or manufacturing methods. Workshops help students build skills while showcasing your company's tools and expertise.

Mini Hackathons & Design Challenges

For deeper engagement, we can organize a short design or coding challenge that students tackle over an evening or weekend. Sponsors help set the brief, and the challenge is framed around real problems and constraints from their industry.

Shop / Garage Tours & Car Demos

Sponsors are invited to visit our workspace at uOttawa, see the car up close and talk with team members about design choices and ongoing work. For higher tiers, the team can also bring the car to a company site visit or recruiting event, where logistics allow.

Resume Booklet & Recruiting

Each semester, our leads compile a curated resume booklet of active Rough Rider Racing members. Depending on sponsorship tier, partners receive:

- A standard copy of the booklet for general recruiting,
- Early access with the option to filter by discipline or subteam, and
- A featured page highlighting their company and open roles.

Sponsors can also share co-op and job postings with the team, use events to connect with students directly and identify potential candidates for interviews, plant tours or info sessions.

These programs turn sponsorship into an ongoing relationship, not just a logo on the car.

We help our sponsors connect directly with the students they support. Through our yearlong engagement programs, you can share your expertise, explore talent, and build lasting relationships.

LUNCH & LEARNS

Host an informal lunchtime talk where engineers or recruiters share projects, technologies, or career paths and meet students from multiple subteams.

TECHNICAL WORKSHOPS

Hands-on workshops on topics such as CAD, drivetrain design, wiring standards, simulation, safety, or manufacturing. Build student skills while showcasing your expertise.

MINI HACKATHONS & DESIGN CHALLENGES

Organize a short design challenge over based on real industry-style problems and constraints. Sponsors help set the brief.

TOURS & CAR DEMOS

Visit us, see the car, and talk with the team about design choices and ongoing work. For higher tiers, the team may bring the car to the company site or recruiting events when logistics allow.

RESUME BOOKLET & RECRUITING

Gain direct access to active Rough Rider Racing members and promote your opportunities.

Standard resume booklet for general recruiting

Early access with filtering by discipline or subteam.

Highlighting your company and open roles

Sponsors can also share co-op and job postings with the team and connect with students directly to identify potential candidates for interviews, plant tours, or info sessions.

These programs turn sponsorship into an ongoing relationship, not just a logo on the car.

For the 2026 season, Rough Rider Racing plans to compete at:

Baja SAE New York – June 11-14, 2026

A major SAE competition in the United States that attracts a large field of teams and features technical courses, varied terrain and a challenging endurance race. This event is our primary benchmark against top Baja programs.

Oktobaja – Early October, 2026

A fall invitational that gives us an early opportunity to run the car in competition, tune our four-wheel-drive setup and collect performance data before the main SAE event. It also allows newer team members to experience a race environment.

Épreuve du Nord – Feb 6-7 2027

A winter competition in ELaval, Quebec that pushes both car and team with cold weather, snow and ice. It is an ideal proving ground for durability and reliability in harsh conditions and helps us prepare for unexpected environments at other events.

Support from sponsors helps us cover registration, transportation, lodging and food so we can send a full team of drivers, leads and support members to each competition and represent the University of Ottawa on the Baja SAE stage.

CURRENT SPONSORS OF RRR

Monetary & In-Kind Sponsors

These companies directly fund or supply materials, components and services that reduce our out-of-pocket costs:

- Miller Wealth Management
- DBG Engineering
- ETBO Tool and Die

Their support helps cover construction materials, machining, tools, testing and competition expenses for the 2025–2027 program.

Software Partners

- SolidWorks
- Altair
- KISSsoft
- 3Dconnexion

We are grateful for the trust and support of all our sponsors and partners, and we look forward to growing this family as our team and program continue to develop.

GETTING IN TOUCH WITH US

12

Thank you for taking the time to learn about Rough Rider Racing and the work our students are doing at the University of Ottawa.

Our team is built and run entirely by students. Every tube we notch, weld we lay and harness we crimp is made possible by partners who believe in hands-on engineering education. With your support, we can finish and compete with our current 2025–2026 car, begin development of our next vehicle for the 2027 season and give more students the chance to learn by building something real.

We would be proud to have your organization as part of the Rough Rider Racing sponsor family. Should you have any questions, please do not hesitate to reach out.

Best,

Nora Jordan – Team Captain
Jason Demers – Faculty Advisor
